

MTAC-LORA Power Draw

MTAC-LORA 1.0 Power Draw

The following power draw values were measured with the MTAC-LORA card installed in a Conduit® device.

Voltage	Typical Power – No Connection (Amps)	Typical Power w/Ethernet Cable Attached (Amps)	Max Power – Passing Data Stream (Amps)	Total Inrush Charge Duration During Power Up (mSec)	Total Inrush Charge in MilliCoulombs (mC)
9.0 Volts	0.607	0.624	0.633	8.47	5.22
20.0 Volts	0.300	0.306	0.309	17.4	3.84
32.0 Volts	0.206	0.208	0.209	31.4	4.80

MTAC-LORA-H 1.5 Power Draw with no cellular radio in a Conduit

Note

- The following power draw values were measured with the MTAC-LORA-H card inside a Conduit with no cellular radio.
- Transmit power accuracy is +/- 2 dB.

Voltage	Peak Current	9 Volt Input Total Inrush Charge During Power Up	12 Volt Input Total Inrush Charge During Power Up	24 Volt Input Total Inrush Charge During Power Up
915 mHz Card				
3.3 Volt Line	552 mA	4.1 mC	3.6 mC	3.8 mC
5.0 Volt Line	264 mA	4.1 mC	3.6 mC	3.8 mC
868 mHz Card				
3.3 Volt Line	540 mA	2.06 mC	3.76 mC	4.43 mC
5.0 Volt Line	120 mA	2.06 mC	3.76 mC	4.43 mC

MTAC-LORA-H 1.5 Power Draw with Cellular Radio in a Conduit (H5)

Note

- The following power draw values were measured with the MTAC-LORA-H card installed in a Conduit with H5 cellular modem (MTCDDT-H5-247).
- Transmit power accuracy is +/- 2 dB.

Voltage	Radio Protocol	Cellular Call Box Connection, No Data	Average Measured Current at Max Power	Average TX Pulse Amplitude Current for GSM850 or Peak Current for HSDPA	Total Inrush Charge in MilliCoulombs
9.0 Volts	GSM 850 MHz	747 mA	1,010 mA	1.75 Amps	6.06 mC
	HSDPA	748 mA	1,190 mA	1.3 Amps	6.06 mC

Voltage	Radio Protocol	Cellular Call Box Connection, No Data	Average Measured Current at Max Power	Average TX Pulse Amplitude Current for GSM850 or Peak Current for HSDPA	Total Inrush Charge in MilliCoulombs
12.0 Volts	GSM 850 MHz	561 mA	767 mA	1.34 mA	5.21 mC
	HSDPA	563 mA	872 mA	964 mA	5.21 mC
24.0 Volts	GSM 850 MHz	301 mA	393 mA	667 mA	4.15 mC
	HSDPA	302 mA	440 mA	524 mA	4.15 mC

MTAC-LORA-H 1.5 Power Draw with Cellular Radio in a Conduit (LEU1)

Note

- The following power draw values were measured with the MTAC-LORA-H card installed in a Conduit with LEU1 cellular modem (MTCDDT-LEU1-247).
- Transmit power accuracy is +/- 2 dB.

Voltage	Radio Protocol	Cellular Call Box Connection, No Data	Average Measured Current at Max Power	Average TX Pulse Amplitude Current for GSM900 or Peak Current for LTE	Total Inrush Charge in MilliCoulombs
9.0 Volts	EGSM 900 MHz	420 mA	594 mA	1,300 mA	5.0 mC
	LTE	435 mA	770 mA	840 mA	5.0 mC
12.0 Volts	EGSM 900 MHz	315 mA	448 mA	1,030 mA	4.59 mC
	LTE	330 mA	580 mA	648 mA	4.59 mC
24.0 Volts	EGSM 900 MHz	185 mA	251 mA	541 mA	4.4 mC
	LTE	192 mA	315 mA	384 mA	4.4 mC

Conduit Power Draw

If using a Conduit with the mCard™, factor your model's power draw into your power calculations.

- MTCDDT-246 Models Power Draw [the linked post is not published yet]
